

2P ClearMesh Composite

Polypropylene composite mesh

Treatment of the abdominal wall defects
Trattamento dei difetti della parete addominale

2P-CMC[®] ClearMesh Composite - Protesi composita trasparente non riassorbibile

2P-CMC[®] è una protesi chirurgica, trasparente, leggera, ultra sottile, non riassorbibile, in polipropilene, composta da una rete in monofilamento macroporosa e da un film trasparente per minimizzare le aderenze.

Indicazioni:

Trattamento dei difetti della parete addominale causati da laparoceli, con posizionamento intraperitoneale. Può essere utilizzata con approccio chirurgico laparotomico o laparoscopico.

2P-CMC[®] ClearMesh Composite - Nonabsorbable transparent composite prosthesis

2P-CMC[®] ClearMesh Composite is a transparent, lightweight, ultra-thin, nonabsorbable surgical prosthesis in polypropylene, made by a monofilament macroporous mesh and transparent film in order to minimize the adhesion formations.

Indications:

Treatment of the abdominal wall defects caused by hernias and incisional hernias with intraperitoneal positioning. It can be used with laparotomic and laparoscopic surgical approach.

Plurimesh PCMC

Polyvalent ClearMesh Composite

2P-PCMC[®] Plurimesh ClearMesh Composite - Protesi composita trasparente polivalente non riassorbibile

2P-PCMC[®] è una protesi chirurgica, trasparente, leggera, ultra sottile, non riassorbibile, in polipropilene, composta da una rete in monofilamento macroporosa e da un film trasparente per minimizzare le aderenze. 2P-PCMC[®] può essere adattata al difetto e all'anatomia del paziente tramite il taglio della protesi lungo le cuciture guida.

Indicazioni:

Trattamento dei difetti della parete addominale causati da ernie parastomali e/o laparoceli con posizionamento intraperitoneale. Può essere utilizzata con approccio chirurgico laparotomico o laparoscopico.

2P-PCMC[®] Plurimesh ClearMesh Composite - Nonabsorbable Composite transparent polyvalent prosthesis

2P-PCMC[®] is a transparent, lightweight, ultra-thin, nonabsorbable surgical prosthesis in polypropylene, made by a monofilament macroporous mesh and a transparent film in order to minimize the adhesion formations. 2P-PCMC[®] can be adapted to the defect and anatomy of patient, cutting the prosthesis around the guide seams.

Indications:

Treatment of the abdominal wall defects caused by parastomal and/or incisional hernias with intraperitoneal positioning. It can be used with laparotomic and laparoscopic surgical approach.

2P-FlaPp CMC - Protesi composita non riassorbibile

2P-FlaPp CMC  è una protesi chirurgica, trasparente, leggera, ultra sottile, non riassorbibile, in polipropilene, composta da una rete in monofilamento macroporosa e da un film trasparente per minimizzare le aderenze. 2P-FlaPp CMC  è una protesi ritagliabile, come indicato nelle istruzioni per l'uso.

Indicazioni:

Treatment of large abdominal wall defects with peritoneal - fascial loss of substance, according to modified Rives technique.

2P-FlaPp CMC - Composite nonabsorbable prosthesis

2P-FlaPp CMC  is a transparent, lightweight, ultra-thin, nonabsorbable surgical prosthesis in polypropylene, made by a monofilament macroporous mesh and a transparent film in order to minimize the adhesion formations. 2P-FlaPp CMC  is a cutting prosthesis, according to instruction for use.

Indications:

Treatment of large abdominal wall defects with peritoneal - fascial loss of substance, according to modified Rives technique.
