

CE (1275)

# FSSB Needle Code

Example: **(2 x) DLZ - 6,2 - 150**

double armed

### Circle Code

- V = 1/4
- D = 3/8
- H = 1/2
- B = bicurved
- G = straight

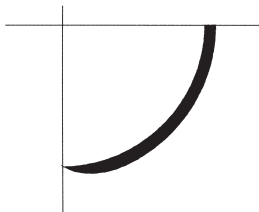

### Needle Point

- LZ = Spatula
- RS = Taper Point
- DS = Taper Cut
- DK = Reverse Cutting
- DSL = Soft Cutting point cardio

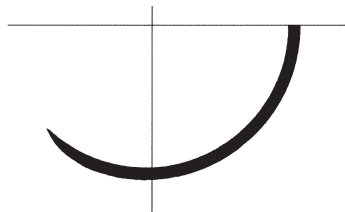

Needle Length  
in mm

Needle Diameter  
in  $\mu$  (micron)

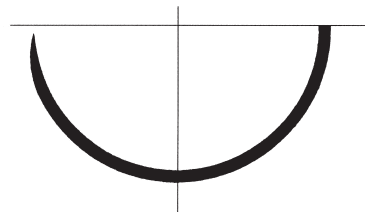

1/4-circle (V)

3/8-circle (D)

1/2-circle (H)

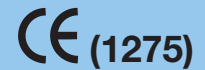

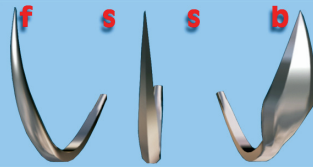

bicurved (B)

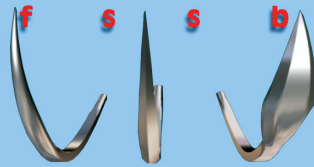

### FSSB-Label

	USP size	Suture material		
	<b>7/0</b>	<b>Polypropylene</b>	<b>75 cm</b>	Order No <b>H004 PP (3)</b>
Needle type	2xDDSL 9,4-230	Surgical suture, non absorbable, monofil Manufactured by FSSB, Allmendweg 2, 79798 Jestetten	metric 0,5	Order number
Needle point		<b>STERILE EO</b>	<b>LOT: 05/010/15</b>	Suture length
Needle shape		<b>CE 1275</b>	<b>2010-09</b>	Lot number
	method of Sterilisation		Date of expiry	

# FSSB Suture Materials

Non-absorbable		Characteristics	Frequent users
<b>NYLON</b> Monofilament Polyamide 6/6 <i>black or blue</i>		Monofilament polyamid with high tensile strength. The uniform and smooth surface permits effortless passage through tissue with minimum trauma. Extremely well tolerated.	First choice material for ophthalmology and micro-surgery.
<b>POLYPROPYLENE</b> Monofilament <i>black or blue</i>		More pliable and soft, smooth passage through tissue. Excellent knot security, superior tensile strength.	Absolutely minimized trauma. Mostly used in cardiovascular surgery, as well as ophthalmology.
<b>POLYESTER</b> Monofilament or braided prestabilized. Treated with wax, silicone or teflon. <i>green or white</i>		Polyester with improved tensile strength and knot security. A modern braiding technique (braided Polyester) gives the strand a smooth and uniform surface that minimizes the trauma.	Plastic, hand surgery, ophthalmic and cardiovascular surgery.
<b>VIRGIN SILK</b> <i>Logwood black</i> <i>Methylene blue</i> <b>SILK</b> Braided <i>black or natural white</i>		Twisted strand (Virgin silk), very smooth and with high knot security.  Braided surgical silk on twisted core for greater tensile strength.	Ophthalmic surgery.
<b>PVDF</b> Monofilament Polyvinylidenfluoride <i>blue, green or black</i>		Smooth tissue passing, very secure knotting, excellent tissue tolerability. Maintained indefinitely in tissue.	Cardiovascular surgery.
<b>STAINLESS STEEL</b> Multifilament wire Monofilament wire		Monofil and multifilament non-absorbable implantable surgical suture material made of high-grade surgical stainless steel.	Cardiovascular surgery, Sternotomy. Plastic surgery.
<b>TITANIUM</b> Monofilament wire		Monofil non-absorbable implantable surgical suture material made of high-grade surgical titanium.	Cardiovascular surgery, Sternotomy. Plastic surgery.
<b>Absorbable</b>			
<b>PGA</b> Monofilament USP 9/0 10/0 11/0 Multifilament braided Polyglycolic Acid <i>violet</i>		Predictable absorption, high tensile strength, excellent knot security, reliable bioabsorbability.	Wherever eventual absorption is required.
<b>Caprolon ®</b> Monofilament Poly (L-Lactid-co-ε-Caprolacton) <i>violet and undyed</i>		Synthetic and absorbable suture material provides a long lasting wound support. Smooth passage through tissue.	Wherever eventual absorption is required.
